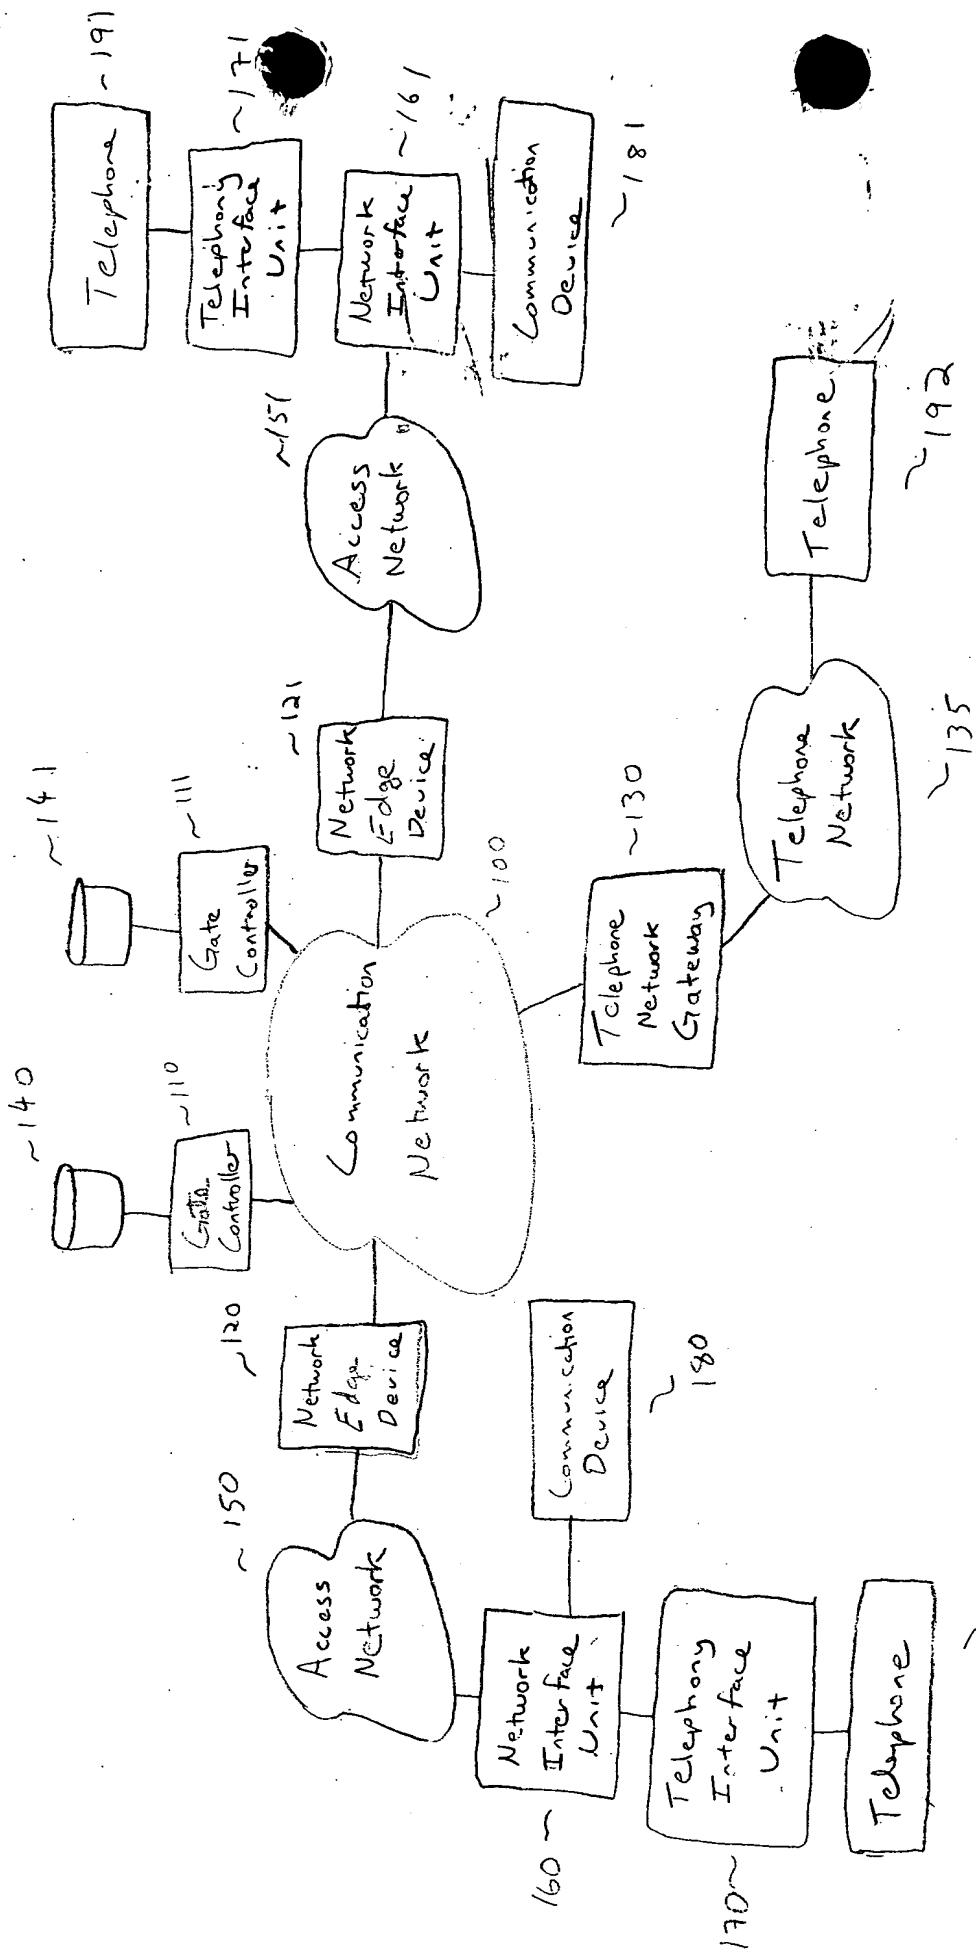

FIG. 1

Send, from TI_U to GC_0 and GC_T , a setup message for the call

~210

Establish a gate at NED_T upon receiving the setup message from GC_T

~220

Establish a gate at NED_0 upon receiving the setup message from GC_0

~230

Send a reserve message from TIU_0 to NED_0

~240

Send a reserve message from TIU_T to NED_T

~250

Exchange end-to-end message between TIU_0 and TIU_T

~260

Upon connecting the calling party and the called party, send a commit message from TIU_0 to NED_0 and from TIU_T to NED_T

~270

Upon receiving the commit message at NED_0 , open the gate at NED_0

~280

Upon receiving the commit message at NED_T , open the gate at NED_T

~290

Calling party goes off-hook and dials a telephone number of the called party

~310

↓
TIU₀ collects the dialed digits

~320

↓
TIU₀ sends a setup message to GC₀

~330

↓
Forward the setup message to GC_T

~340

↓
Forward the setup message to TIU_T

~350

↓
If the destination address of the setup message matches TIU_T, sending to the TIU₀ a setup acknowledgement message

~360

↓
Reserve network resources

~370

↓
Send from TIU₀ to TIU_T an end-to-end Ring message

~380

↓
Send from TIU_T to TIU₀ an end-to-end Ringback message

~390

↓
Upon call acceptance by the called party, send an end-to-end Connect message from TIU_T to TIU₀

~395

FIG. 3

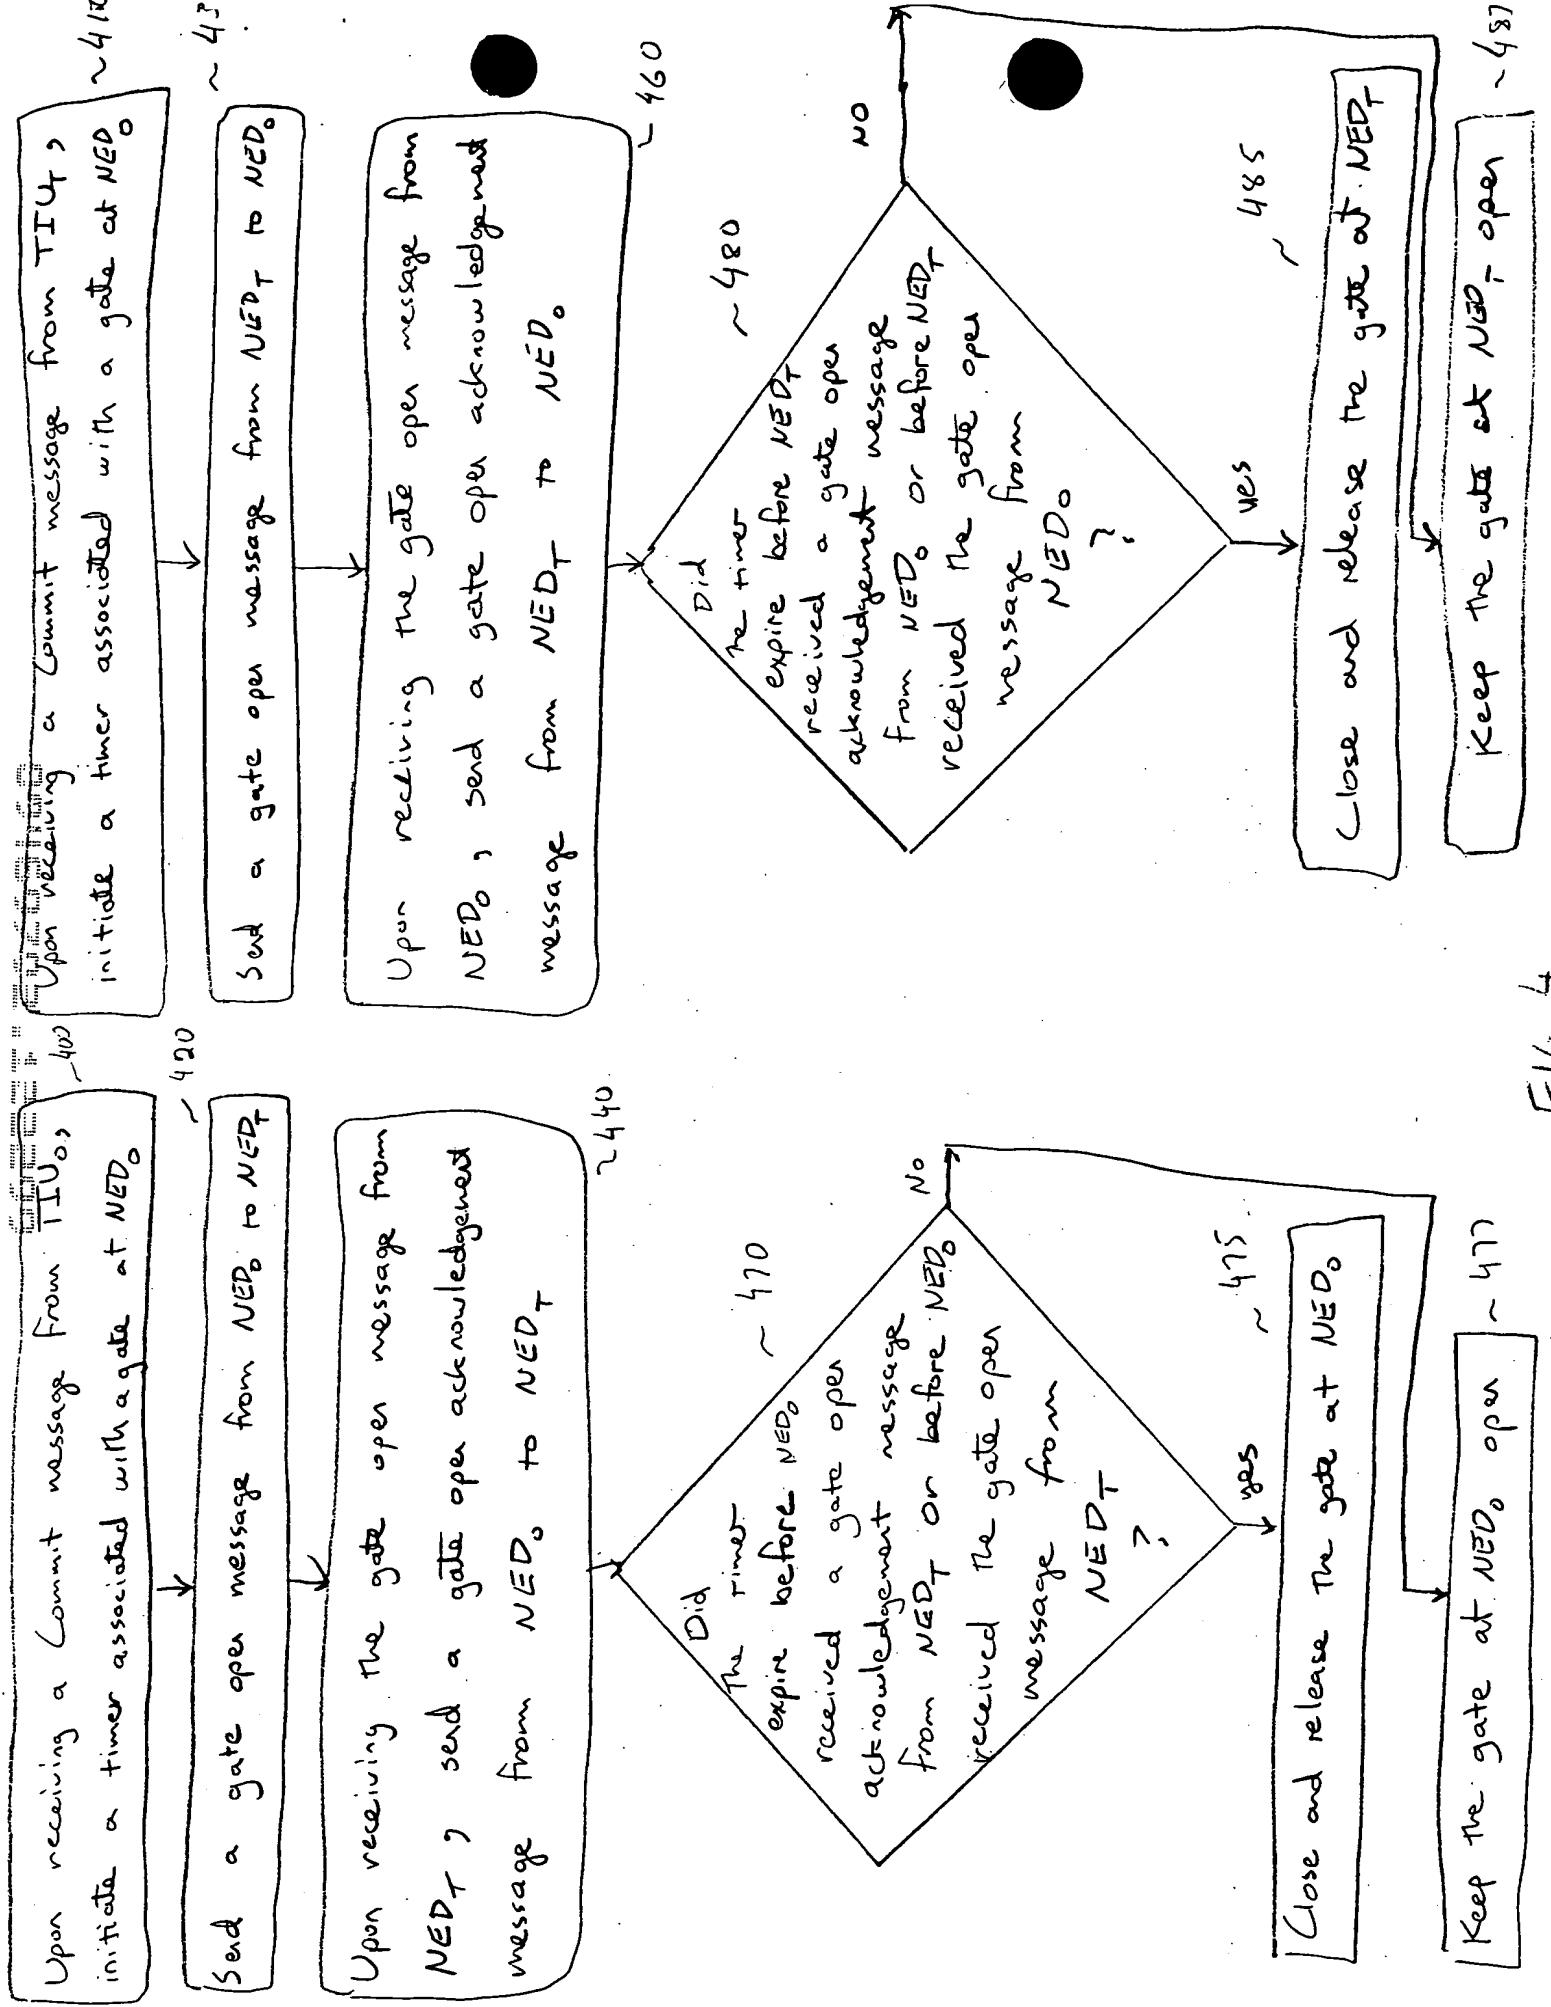

Fig. 4

↓
[Packets are sent from TIU₀ to NED₀] ~ 500

↓
[Translate the local source address and local destination address to a global source address and a global destination address] ~ 510

↓
[Forward the translated packets from NED₀ to NED_T] ~ 520

↓
[Translate the global source address and the global destination address to a second local source address and a second local address] ~ 530

↓
[Send the translated packets from NED_T to TIU_T] ~ 540

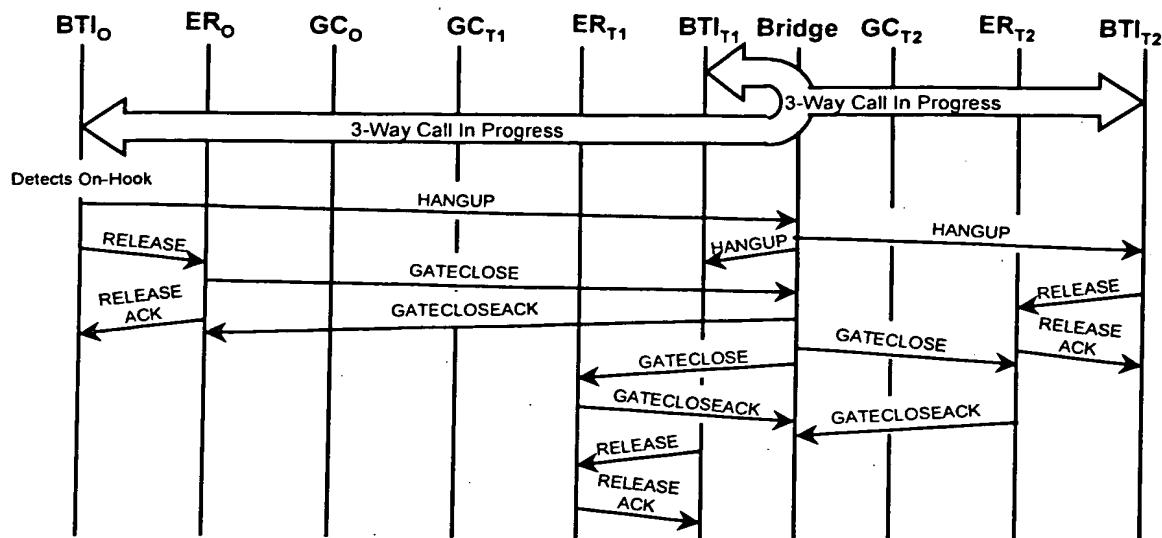

Figure 28

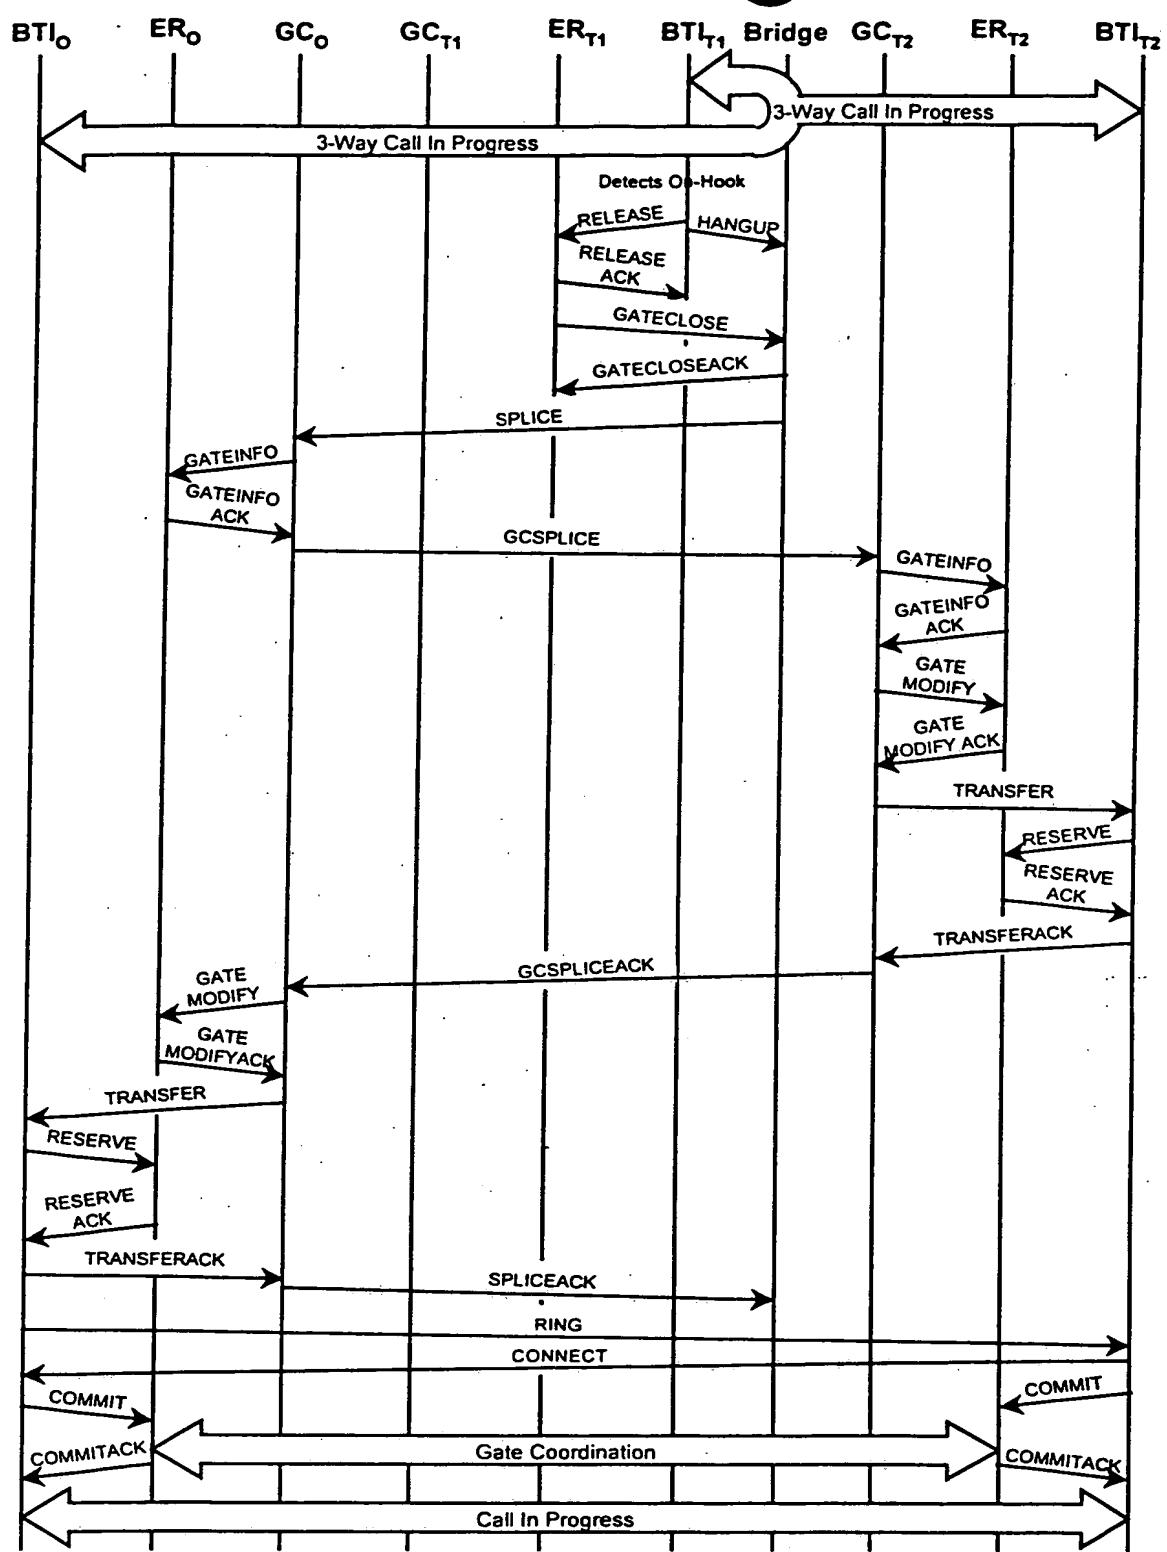

Figure 29

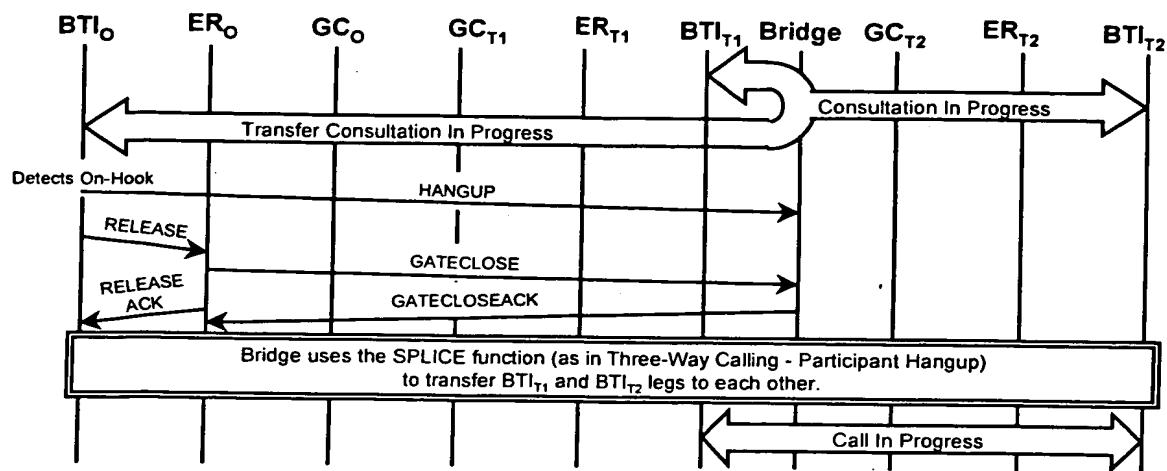

Figure 30

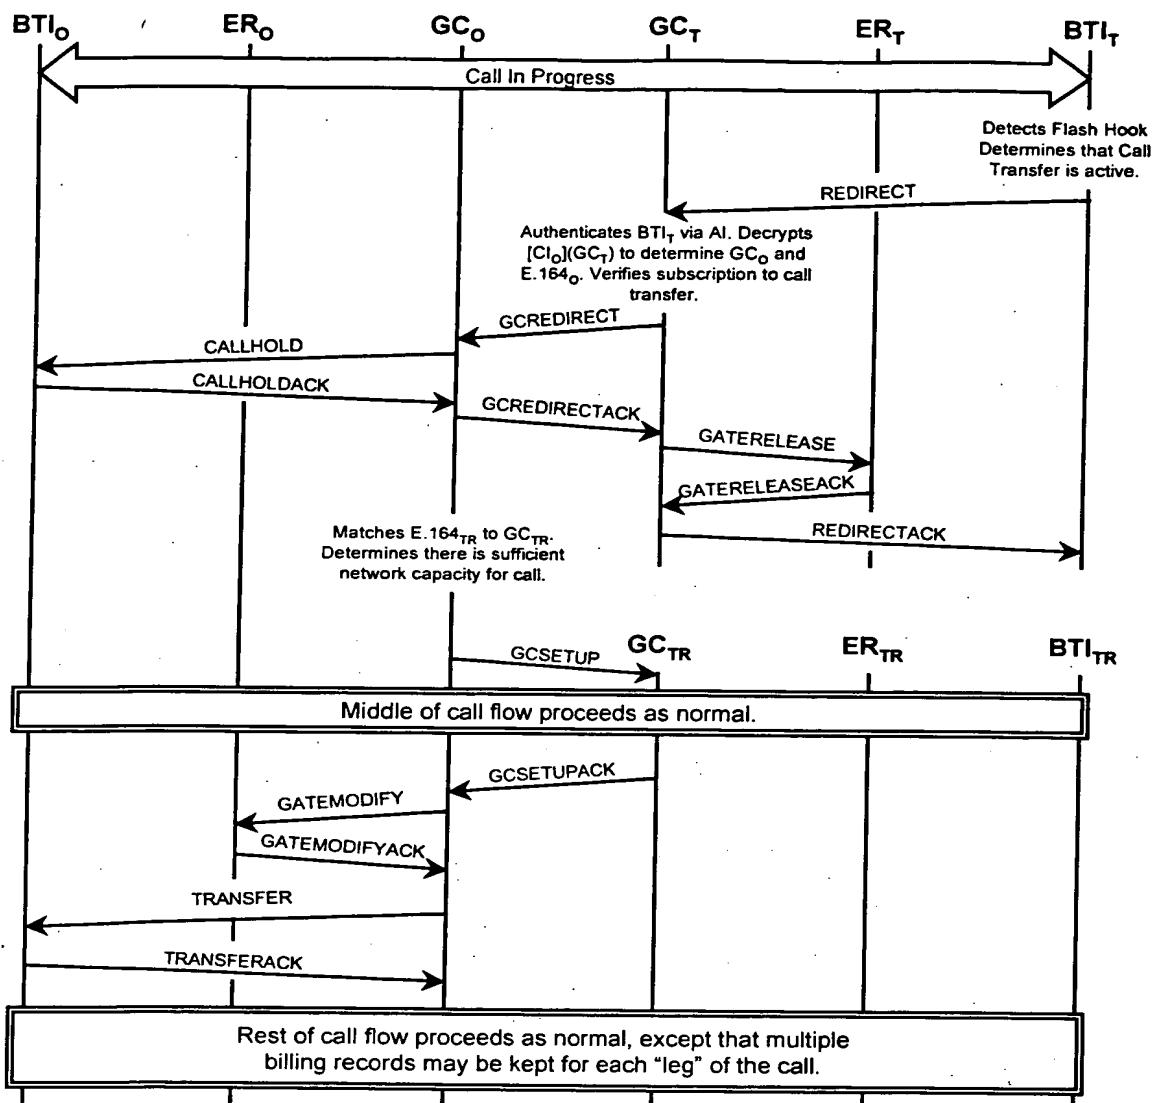

Figure 31

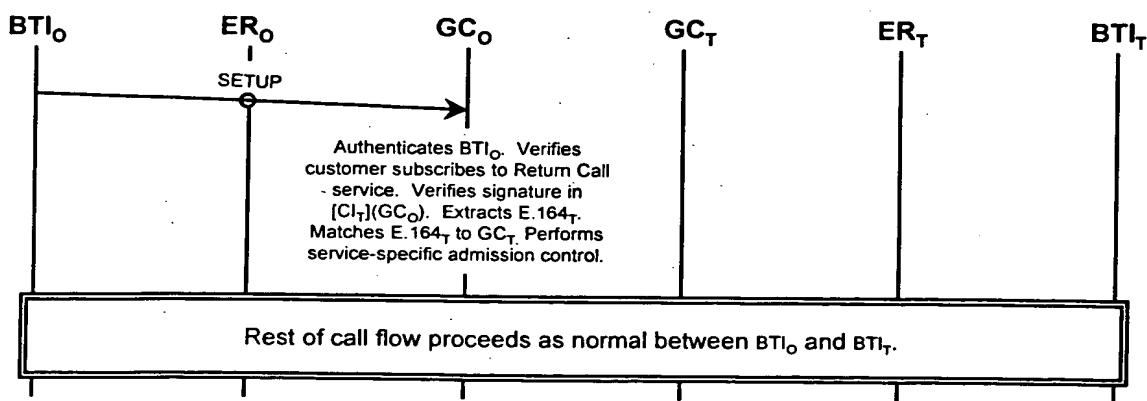

Figure 32

Sending a ring message to a terminating TIU ~ 1000

Upon ringing the terminating telephone, sending a ring back message from the terminating TIU to the originating TIU ~ 1100

Selecting a prestored ringback signal from a set of prestored ringback signals, the selected prestored ringback signal being associated with terminating access network ~ 1200

Sending the selected prestored ringback signal to the calling party ~ 1300

Upon the called party going off hook, sending a connect message from the called party to the calling party ~ 1400

Discontinue providing the ring back signal to the calling party ~ 1500

Process the call as normal ~ 1600

FIG. 33

Send a dial number from calling party to GCo. ~700

Send a gate setup message from the GCT to NED_T. ~710

Send a gate setup acknowledgment message from NED_T to GCT. ~715

Send a setup message from GCT to TIU_T. ~720

Send a setup acknowledgment message having the call forwarding flag from TIU_T to GCT. ~730

Verify, at GCT, call forwarding service subscription by called party. ~740

Determine forwarding number and billing information at GCT. ~750

Send a gate release message from GCT to NED_T. ~760

Send a setup acknowledgment message from GCT to GCo. ~765

Close gate at NED_T. ~765

Send a setup message from GCo to GCF. ~770

Send a gate release acknowledgment message from NED_T to GCT. ~770

Continue processing of call. ~780

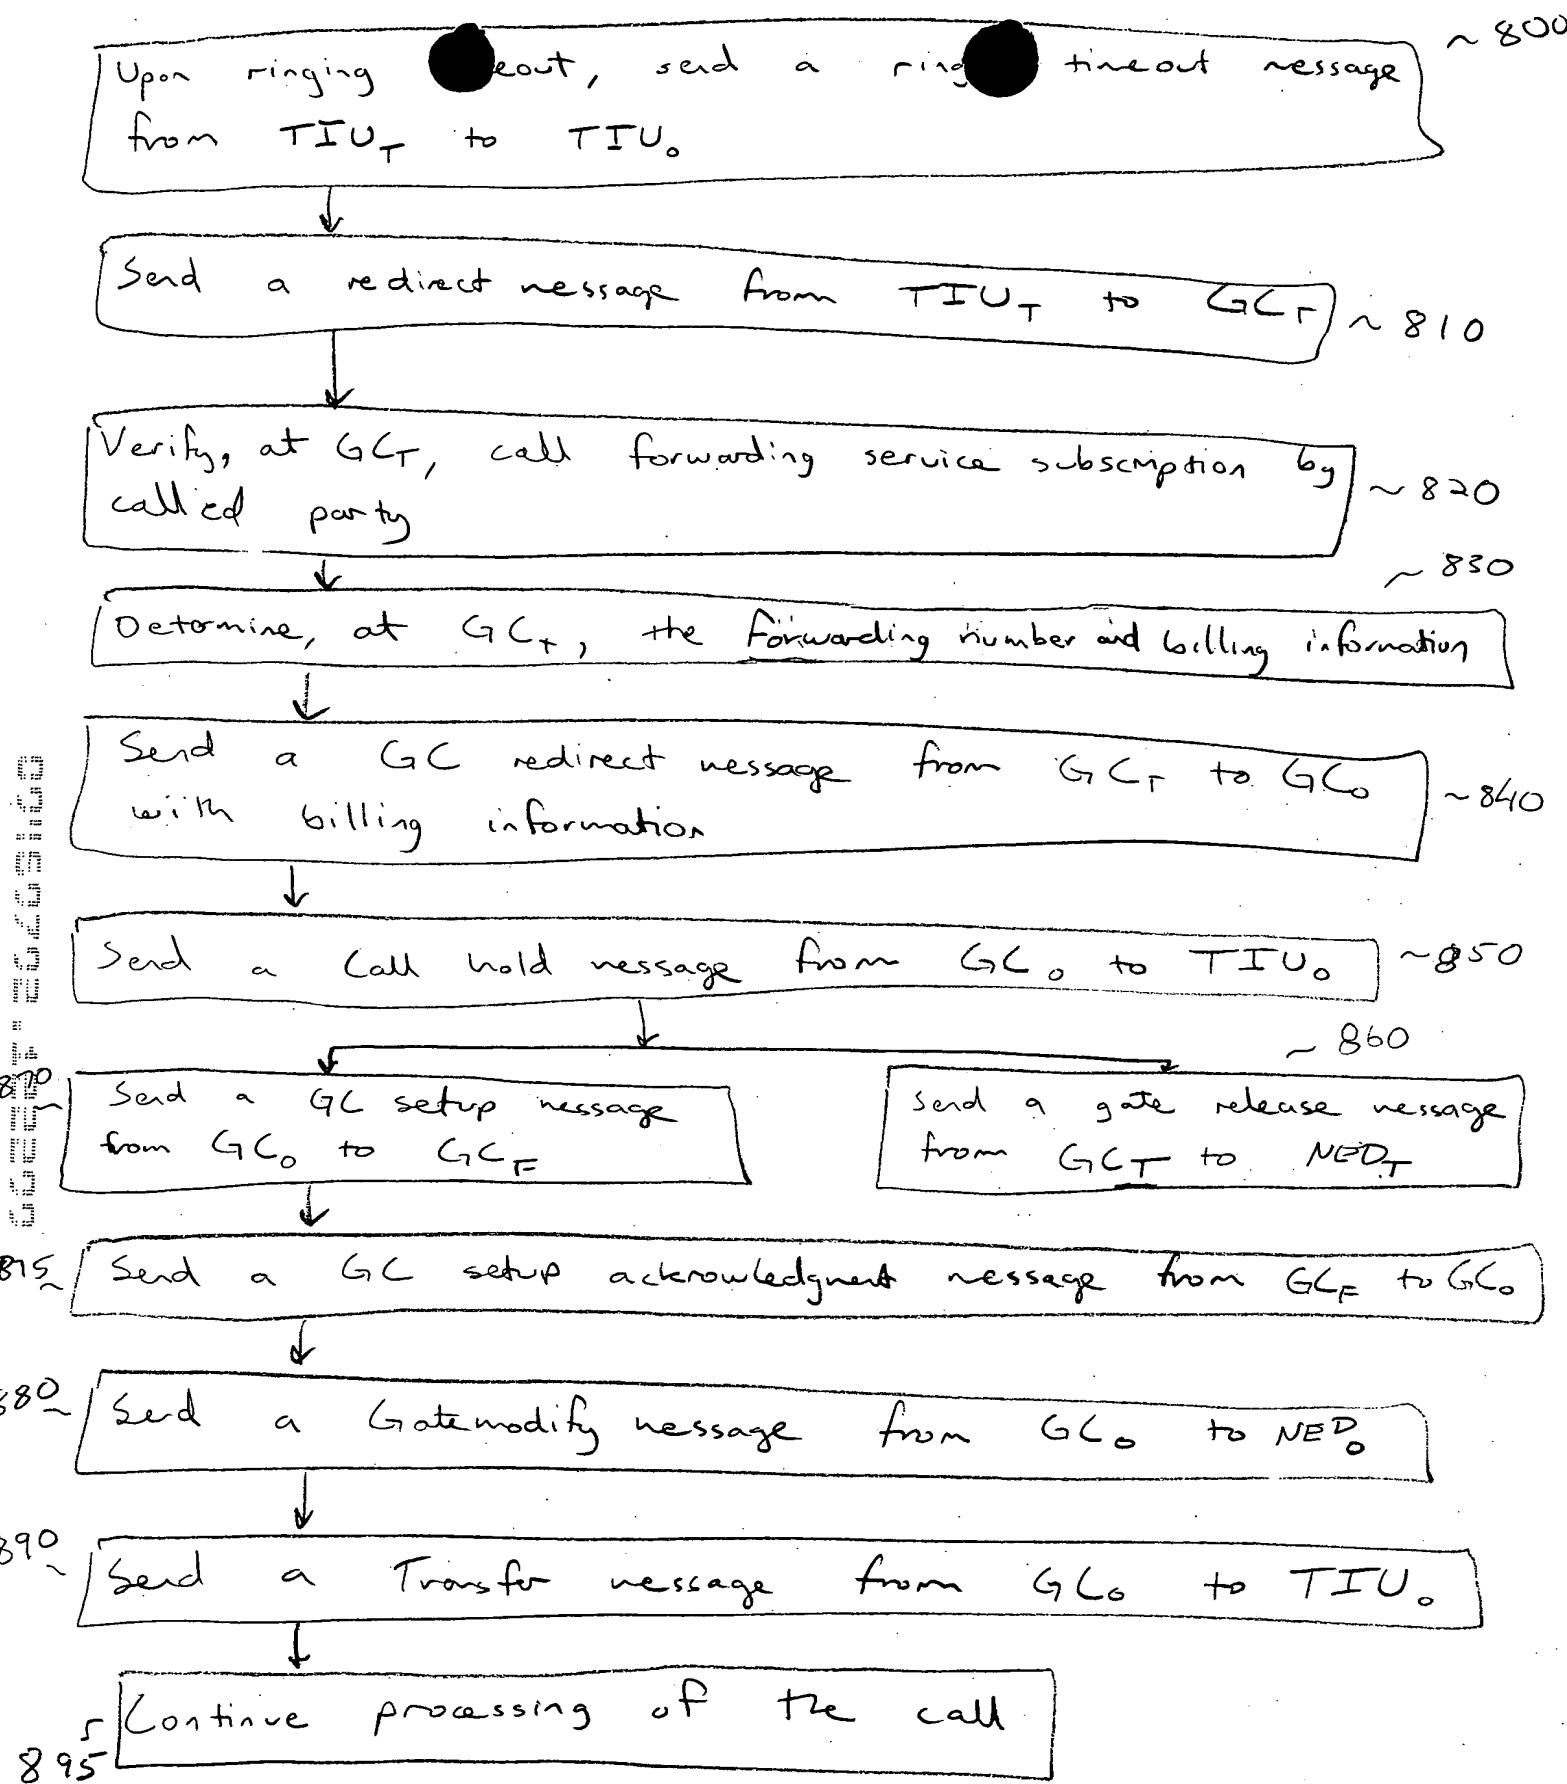

FIG. 35

Receiving a surveillance request from a surveillance receiver ~900

Modifying a database record associated with the communication line to indicate a surveillance request ~910

ON A PER-CALL BASIS

Upon receiving a setup message at GCo, GC_o verifies whether the communication line is to be surveiled based on database record ~920

Sending a message indicating the address of the surveillance receiver to NED_o from GCo ~930

Sending a surveillance message indicating the dialed number to the surveillance receiver from GCo ~940

Sending a supplemental message with surveillance information to the surveillance receiver from NED_o ~950

Multicasting packets from NED_o to call recipients and the surveillance receiver ~960

Sending a supplemental message with surveillance information from NED_o to the surveillance receiver at the end of the call ~970

Send a reserve message from TIU_0 to NED_0
after TIU_0 sends a setup message to NED_0
and after TIU_0 receives a setup acknowledgment message

~2000

Checks availability and reserves bi-directional capacity in the originating access network

~2100

Send a backbone reserve message from NED_0
to a router within communication network

~2200

After receiving the backbone reserve message at the router within communication network, check availability and reserve forward-direction capacity

~2300

Forward the backbone reserve message from the router within the communication network

~2400

At NED_0 , receive a backbone reserve acknowledgment message from NED_T

~2500

Send a reserve acknowledgment message from NED_0 to TIU_0

~2600
